

ABSTRACT

The system for displaying information displays, to a user of a vehicle, information data on a first screen (16) which is connected to a computer (14) connected to a portable electronic device (19) which contains a second screen (17), via a data input/output means (15), such that the first screen (16) displays visually inverted the same information data as that displayed by the second screen (17), so that whilst the driver is driving, he can read the information data reflected in the front windscreen of the vehicle, the reflected image being obtained from the first screen (16). Thus, the driver is in control of the vehicle whilst he is driving, and simultaneously operating the portable electronic device (19).

(54) Title: INFORMATION DISPLAY SYSTEM

(54) Título: SISTEMA PARA MOSTRAR INFORMACION

(57) Abstract: The invention relates to an information display system whereby a vehicle user can view information data from a first screen (16) which is connected to a computer (14) which in turn is connected to a portable electronic device (19) by means of a data input/output means (15), said portable device (19) comprising a second screen (17). According to the invention, the first screen (16) displays the same data as the second screen (17) but in an inverted manner, such that while the driver is driving he/she can read the data reflected by the front windshield of the vehicle, the reflected image originating from the first screen (16). In this way, the driver can control the vehicle while driving and, simultaneously, operating the portable electronic device (19).
